
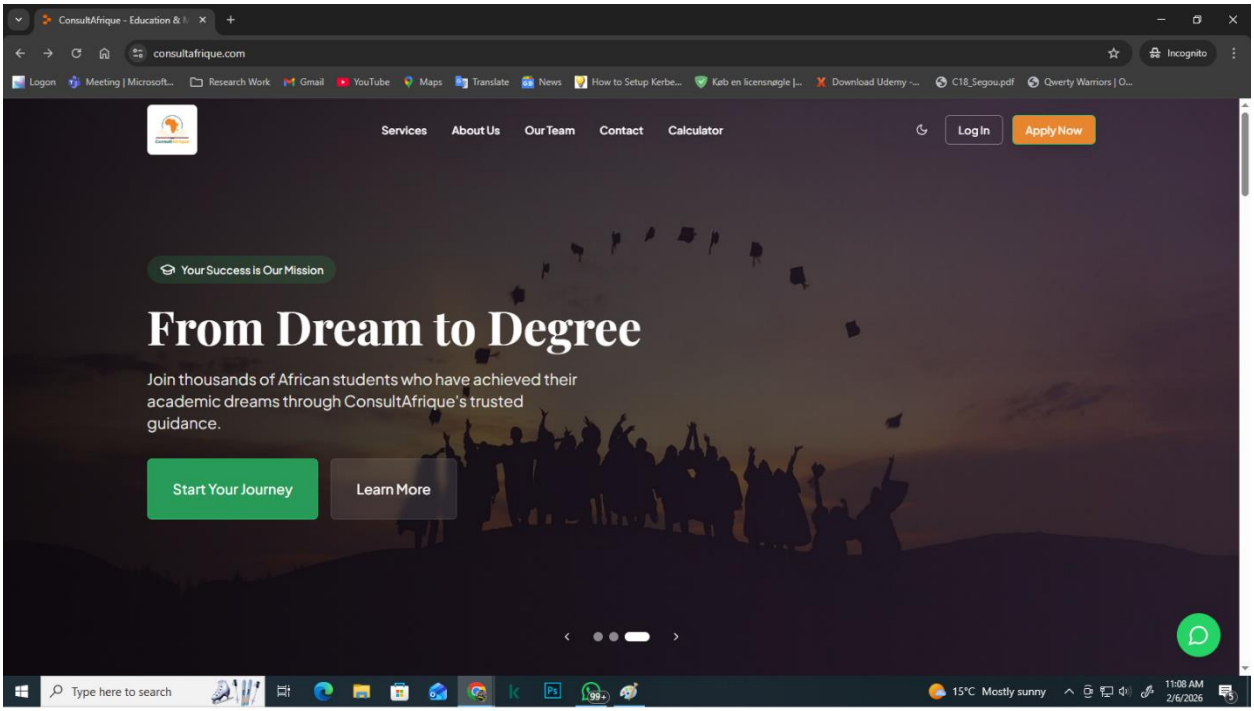
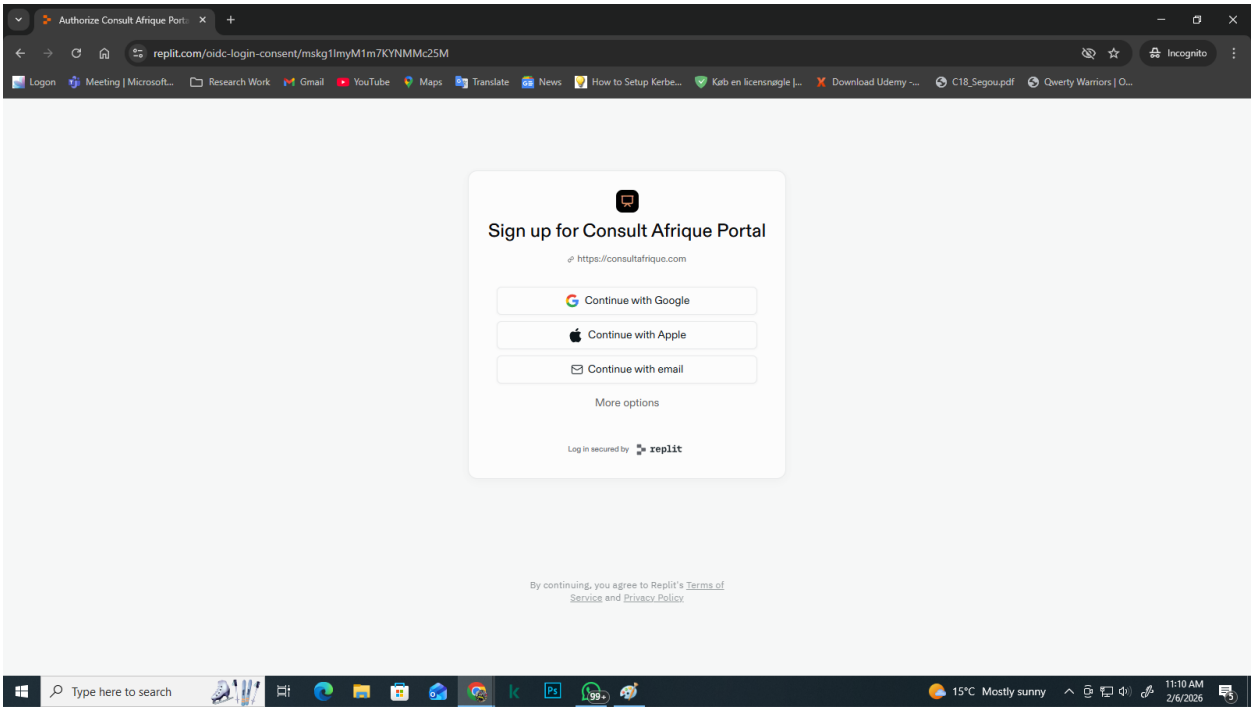
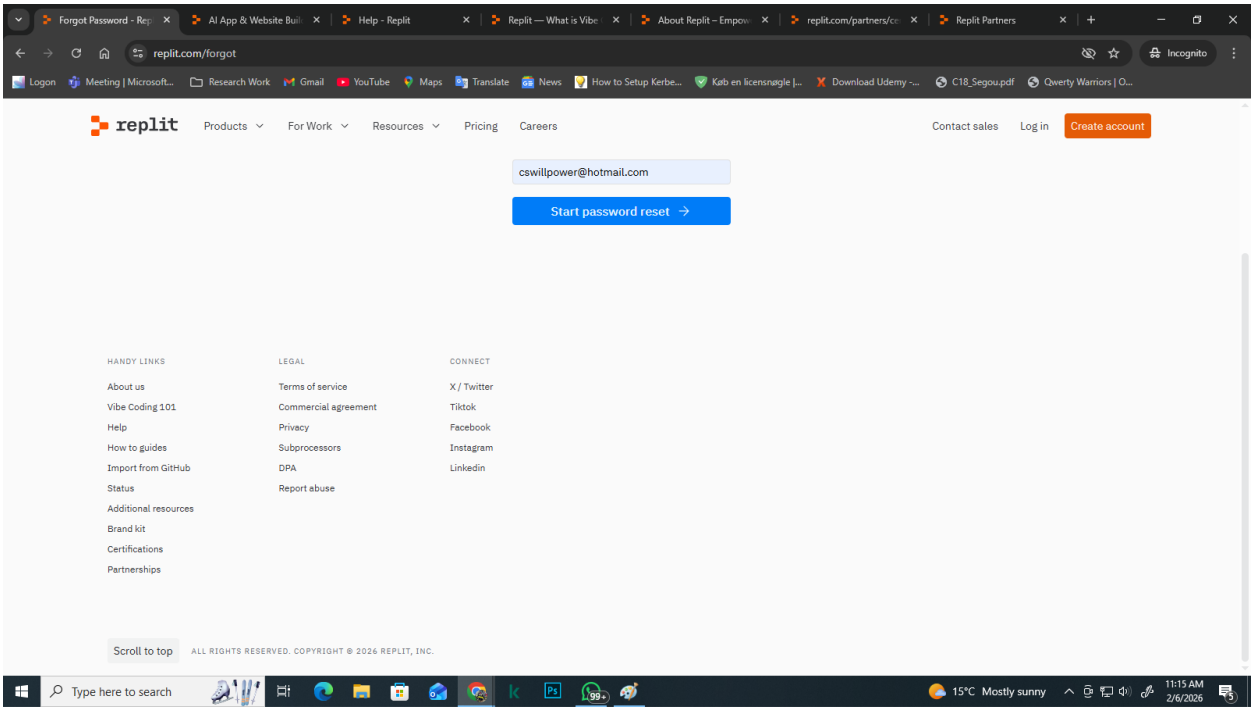
So here the issue is it should be our consultafrique logo as favicon, and the buttons to registed should only mention get started or register with us or start your journey not apply as a patient or apply as a student it only specify whether a student or patient when the button is clicked to give them option like tab showing patient or student registration



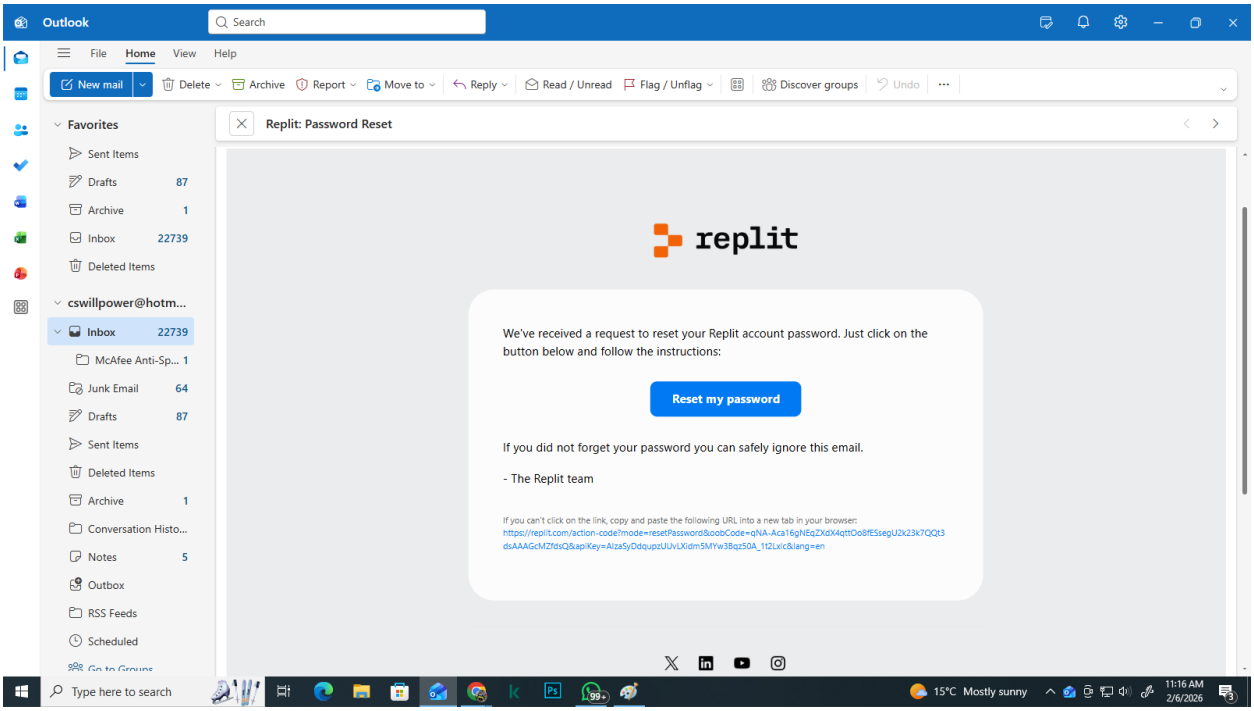
Here there is login button on the in the desktop page but not available in mobile page which is confusing because already registered users will have to click on apply button then, it takes them to registration process insteat of login page, so even this login button on the desktop page does not take users to login staright which is not good



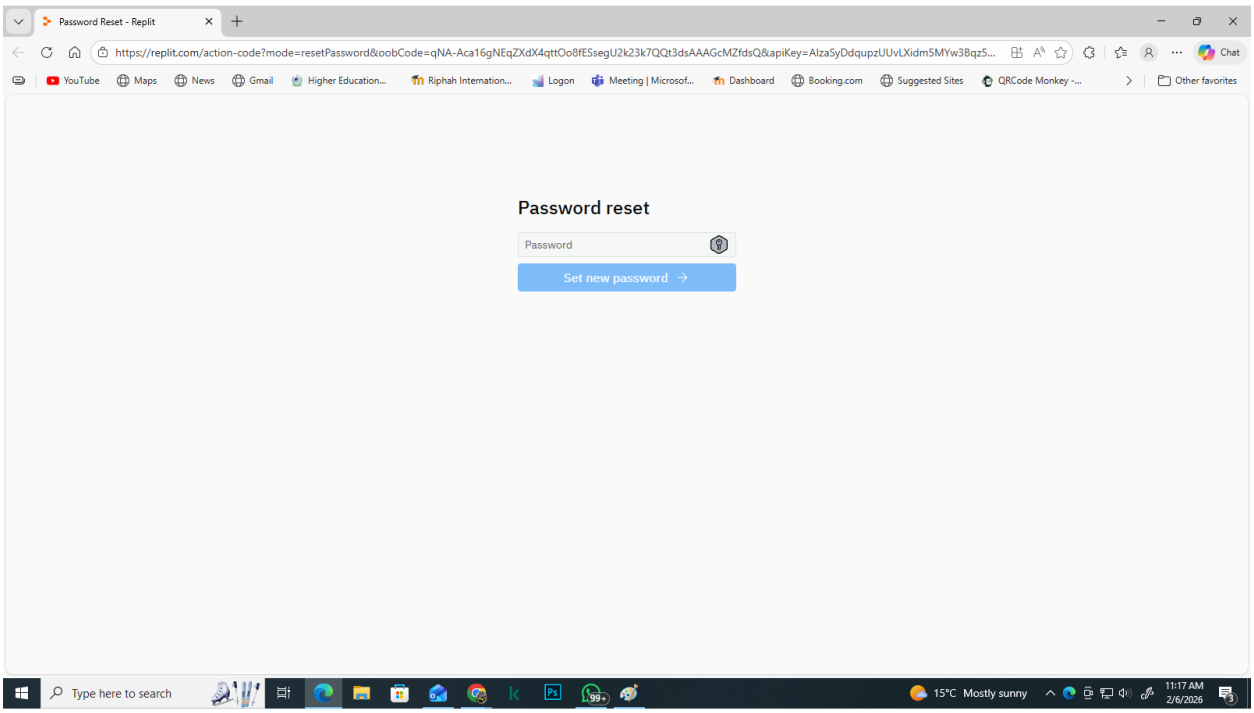
This is where it takes already registered users to , leaving them with no option to login, and also terms shows replit instead of consultafrique, which is also not good



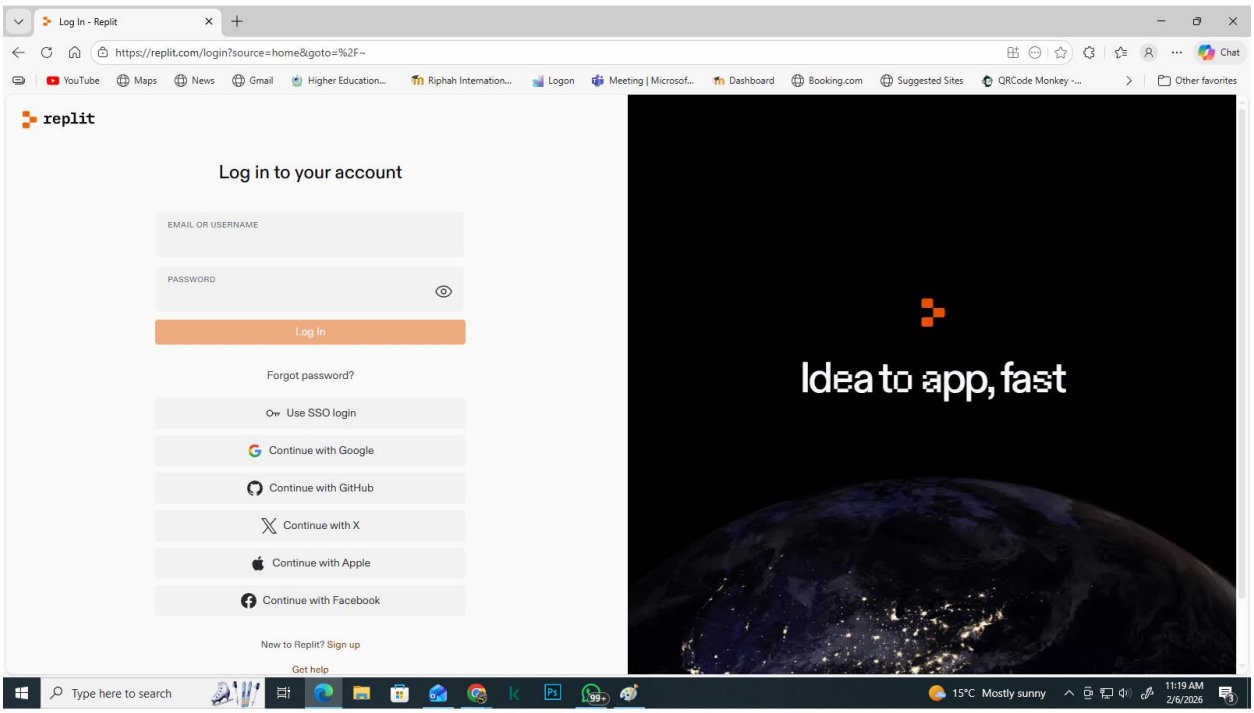
And here is when you click on forget password it shows all about replit site sales and so nothing related to consultafrique even the url I don’t know why



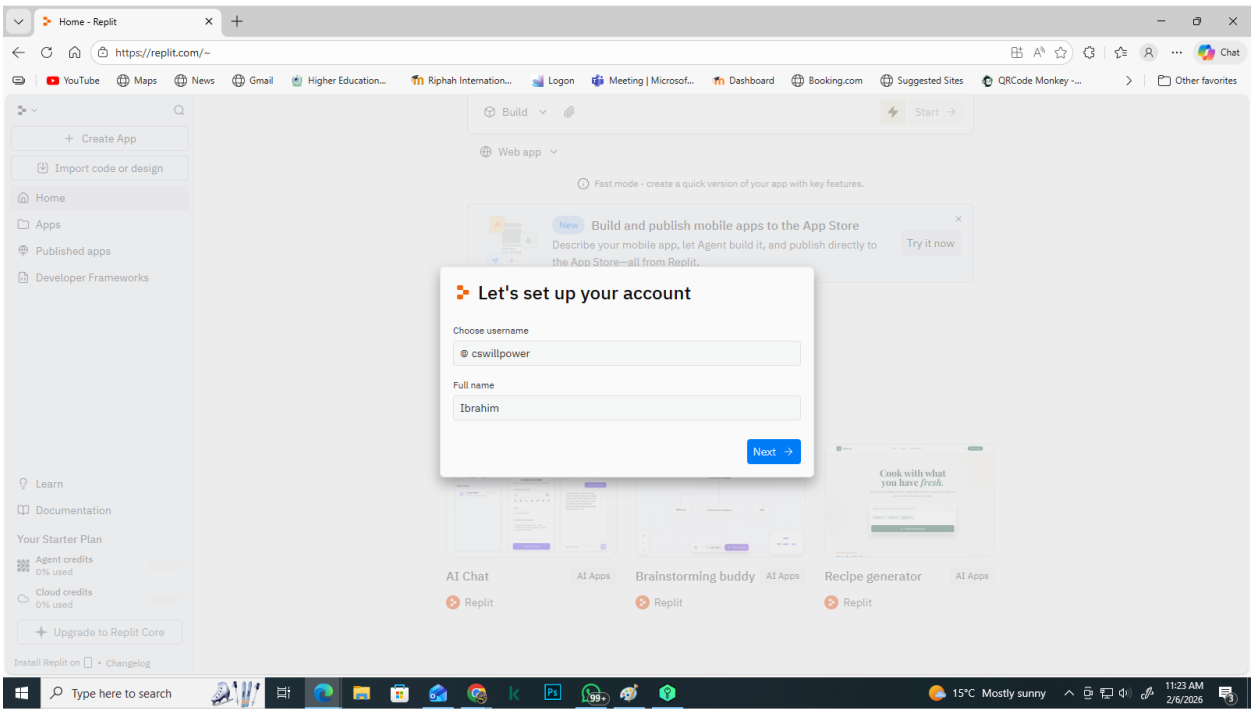
The email sent for reset password also from replit instead of noreply@consultafrique.com



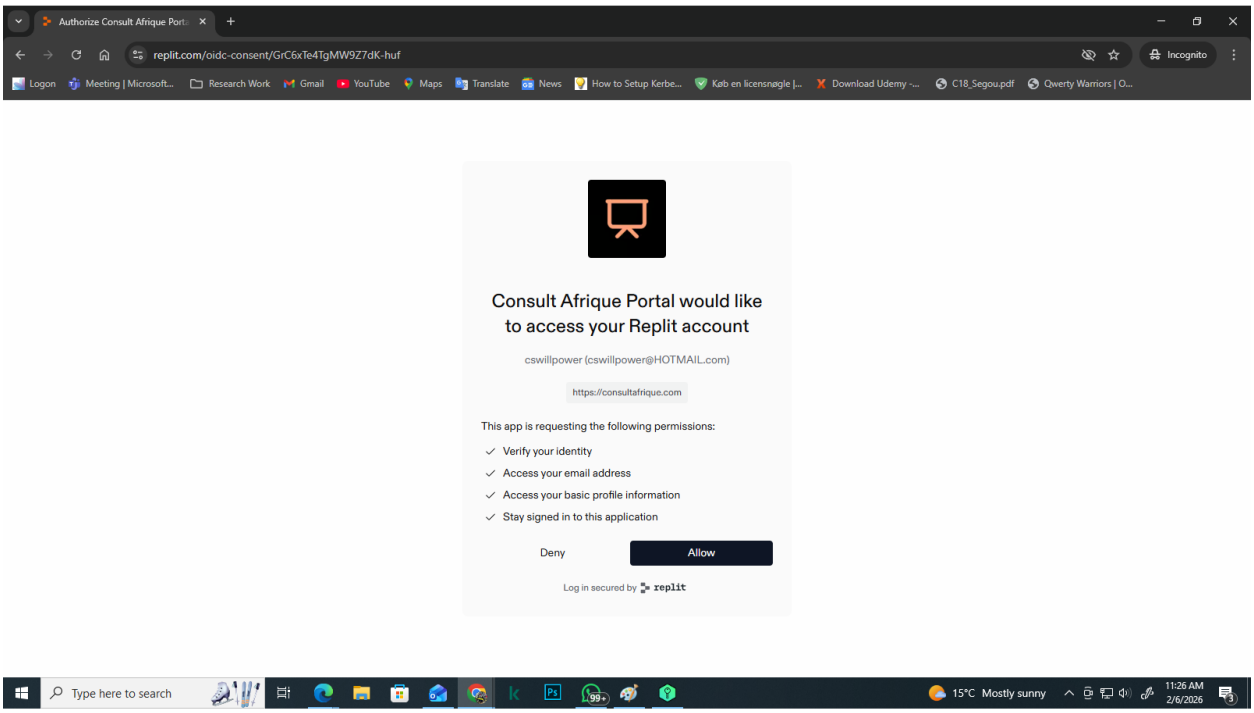
Same reset password stage showing replit url, which is not good



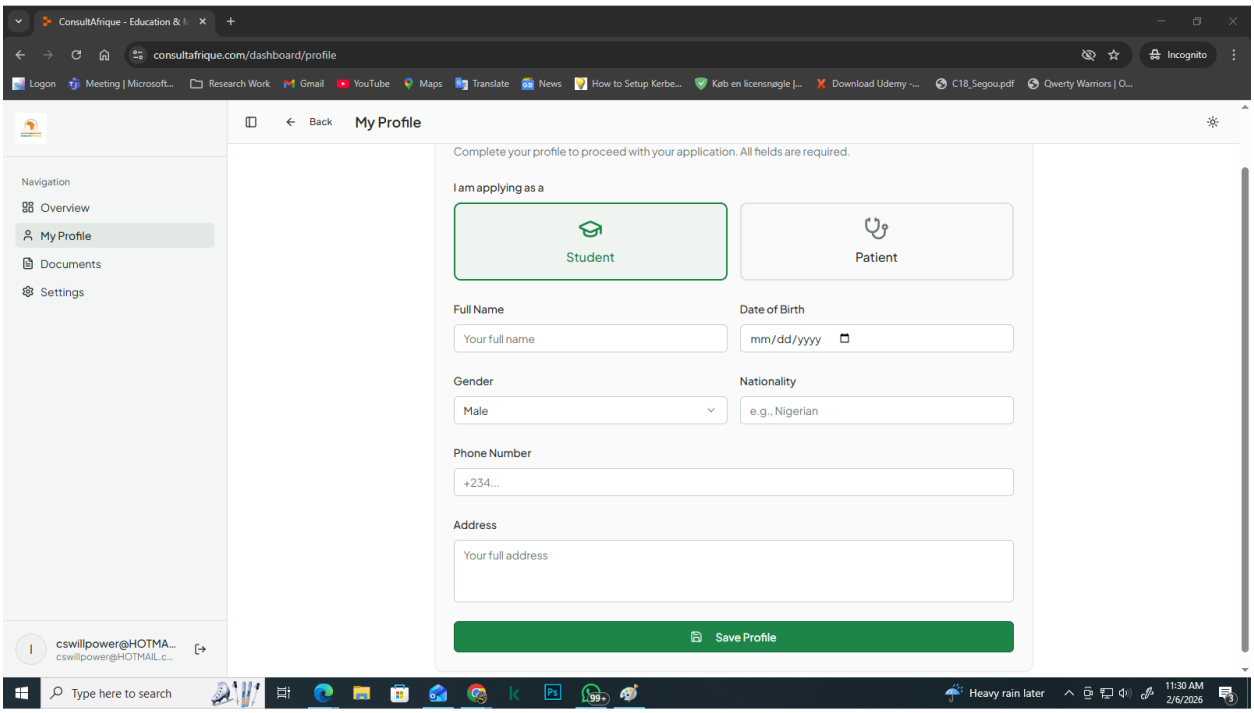
This is after password reset when it asks you to login back to your account, so it leads to this random replit webpage, not good at all



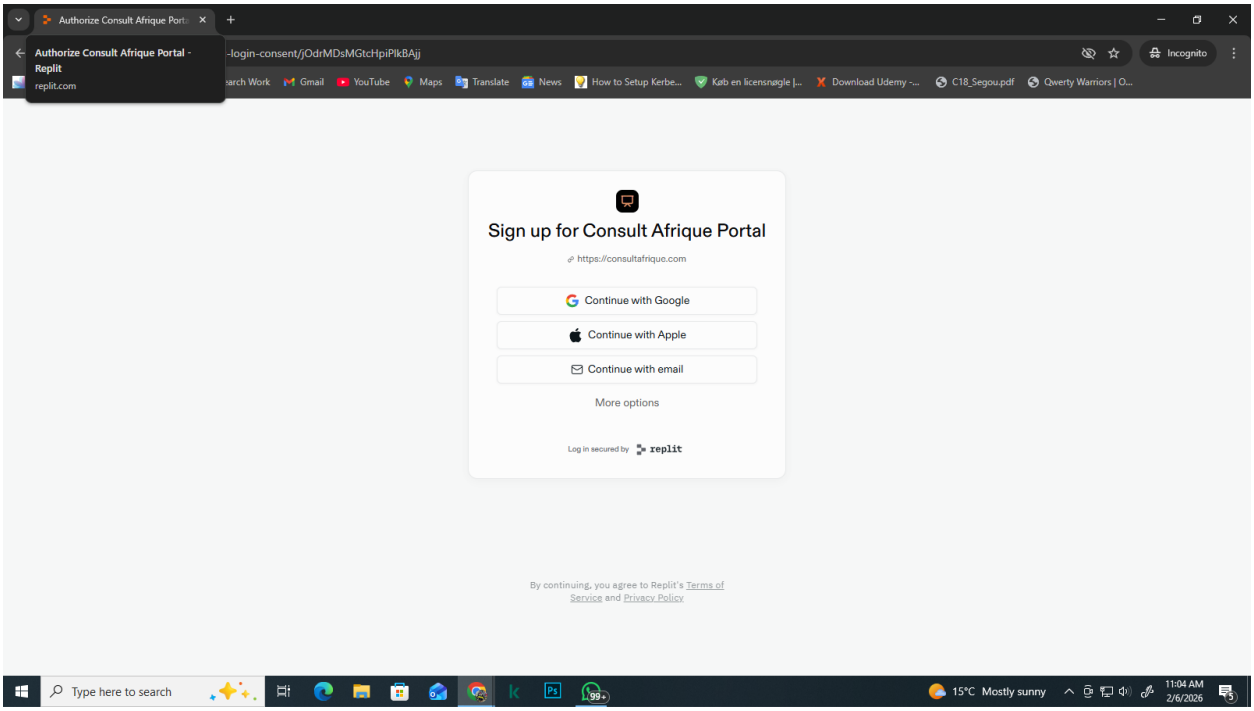
This is after password reset when it asks you to login back to your account, so it leads to this random replit webpage, not good at all



This is when you click to login, which is only suppose to show this message when you are registering using google account, not good at all



This is student profile, there should be a field that let the student to choose or specify if possible mention like 2 more optional their preferred field of study



This is showing authorize consult Afrique portal-replit, it is not good to show anything related to replit in our portal please
